

Black Pantone 248 Pantone 322

DIRECTIONS FOR USE

This product raises total alkalinity in spa and hot tub water. Proper total alkalinity is a critical component of proper water balance. Low total alkalinity can cause rapid deterioration of some types of spa surfaces. Metal fittings can deteriorate and cause staining. Low total alkalinity can also cause the pH to change abruptly and make proper pH levels difficult to maintain.

DIRECTIONS: Consult your spa dealer to determine the proper total alkalinity range for your water. If your water tests low, add this product directly to the spa water with the pump and filter running. Do not premix or dissolve.

Refer to the chart below to determine the amount needed to correctly balance your spa water.

Spa/Tub Capacity (Gallons)	APPROXIMATE TABLESPOONS TO RAISE TOTAL ALKALINITY PPM				
	20ppm	40ppm	60ppm	80ppm	100ppm
400	2.5	5.0	8.0	10.5	13.0
600	4.0	8.0	11.5	15.5	19.5
800	5.0	10.5	15.5	21.0	26.0

FIRST AID: EYES: Flush with clean cool water for 15 minutes holding lids open. See a physician if irritation occurs. SKIN: Wash all affected areas with soap and water. Wash clothing before re-use. INGESTION: In moderate amounts, a form of this product is often taken orally as an antacid. Should a very large amount of this product be accidentally ingested, dilute the swallowed material by rapidly giving large quantities of water or milk if available. Induce vomiting. Repeat procedure until fluid is clear. Call a physician for additional medical advice. INHALATION: Remove from contaminated area. Seek medical attention if respiratory irritation occurs.

STORAGE AND DISPOSAL: Store in a cool, dry area. Wrap empty container and place in trash collection.

ACTIVE INGREDIENT:
Sodium hydrogen carbonate

alkalinity up

- Prevents pH bounce
